

Personal Financial Index® Report

Prepared for: **John Smith**

Prepared by: **John Smith**

Date: **01/10/2016**

PFI Score Details and Recommendations

Your overall PFI Score is **401** against a maximum possible score of **750**. That means you are doing an average job managing your personal finances. Review your individual category scores and financial gap analysis for improvement opportunities. Consider consulting a financial advisor.

Details of your PFI score by category

Debt Management Score

Debt management is how well you are managing your short-term and long-term debt levels and payments. Examples of short-term debt include, auto/boat loan, credit card balance, and personal loans. Short-term debt refers to payments you need to make over the course of the year, including your mortgage, auto loan, credit card, etc. On the other hand, home mortgage is a good example of a long-term debt. Your PFI debt management score is **202** against a maximum possible score of **350**.

Savings Discipline Score

Savings discipline represents how well you are saving to achieve your future financial goals, such as retirement, a major purchase like a home, saving for your kids' college education, etc. Your PFI savings discipline score is **72** against a maximum possible score of **200**.

Risk Management Score

Risk management is how well you are protecting yourself and your family against risks by buying insurance or eliminating the risk. For example, if you own a car, you need auto insurance to protect against the financial loss in case of an accident. Your PFI risk management score is **127** against a maximum possible score of **200**.

Financial Goals Analysis

Retirement

With your target retirement in 10 years, you need to have total savings of \$4,000,000 at the start of retirement. You have saved \$250,000 so far. You need to save a total of \$16,000 per month to meet your retirement goal. Currently you are saving a total of \$2,000 per month.

College education for your child

For your 10 year old, who will go to college in 8 years, you need to have total savings of \$120,000 at this time (or a total of approximately \$209,174 at the start of college). You have saved \$30,000 so far. You need to save a total of \$938 per month to meet this financial goal. Currently you are saving a total of \$500 per month.

Planning for a Major Purchase

For your 1st major purchase, you need to save \$100,000 in 5 years for a down payment. You have saved \$25,000 so far. You need to save a total of \$1,148 per month to meet this financial goal. Currently you are saving a total of \$500 per month.

Life Insurance

Given your financial needs, you need to have life insurance coverage worth about \$2,400,000. Currently you have (including employer provided life insurance, if any) \$750,000 in life insurance.

Helpful hints based on your PFI

Life insurance helps to protect the people you care about. Evaluate your life insurance needs. An umbrella policy protects the assets you have accumulated. Evaluate your umbrella policy needs.

Do you have a Power of Attorney?	No
Do you have a revocable trust?	Yes
Do you have long term care insurance?	Yes
Do you have a Will?	Yes
Do you have a Living Will?	Yes

PFI Disclosures

The Personal Financial Index® (PFI) is a proprietary benchmark to measure the overall financial health of an individual or a family. This benchmark is the property of OMYEN Corp. It takes into account an individual's income, expenses, savings discipline toward future financial goals, and financial risk management, to come up with a personalized PFI score. This benchmark is designed to be wealth level neutral and represents current state only. It should be used for financial education purposes only. The PFI financial analysis and recommendations in this report are for guidance purposes only and cannot be construed as investment or tax advice. This report is based on a number of assumptions. Some key assumptions include:

1. Given the complexity behind federal and state income taxes, we have not considered the effect of income taxes on current retirement savings balances, contributions, and withdrawals during retirement. As a result, the required savings may be significantly different from when taxes are accounted for.
2. It is assumed that your income and expenses will not fluctuate from now until your retirement.
3. Investment rate of return remains same throughout the plan period. In reality, investment returns could fluctuate widely depending on the economic environment and market conditions.
4. Inflation rate remains same throughout the plan period. The inflation rate also varies from year to year depending on the economic environment.
5. The PFI benchmark is not suitable for all ages. Individuals who are not working and those who are retired may not get a good representation of their financial health.

The Personal Financial Index® score and financial analysis based on the data you provided may not be sufficient for making financial decisions.
